

LAB ASSIGNMENT 4

We can **swap** two integer variables by using a third temporary variable as follows.

```
int x = 1;  
int y = 2;  
int temp;  
temp = x;  
x = y;  
y = temp;
```

Let s1 and s2 are two String variables such s1 = "123" and s2 = "abc". **Swap** these two strings **without using an extra variable (temp)**.
